# Message Queue Subsystem Design - Under Development

## Table of Contents

This document is under development

# Overview

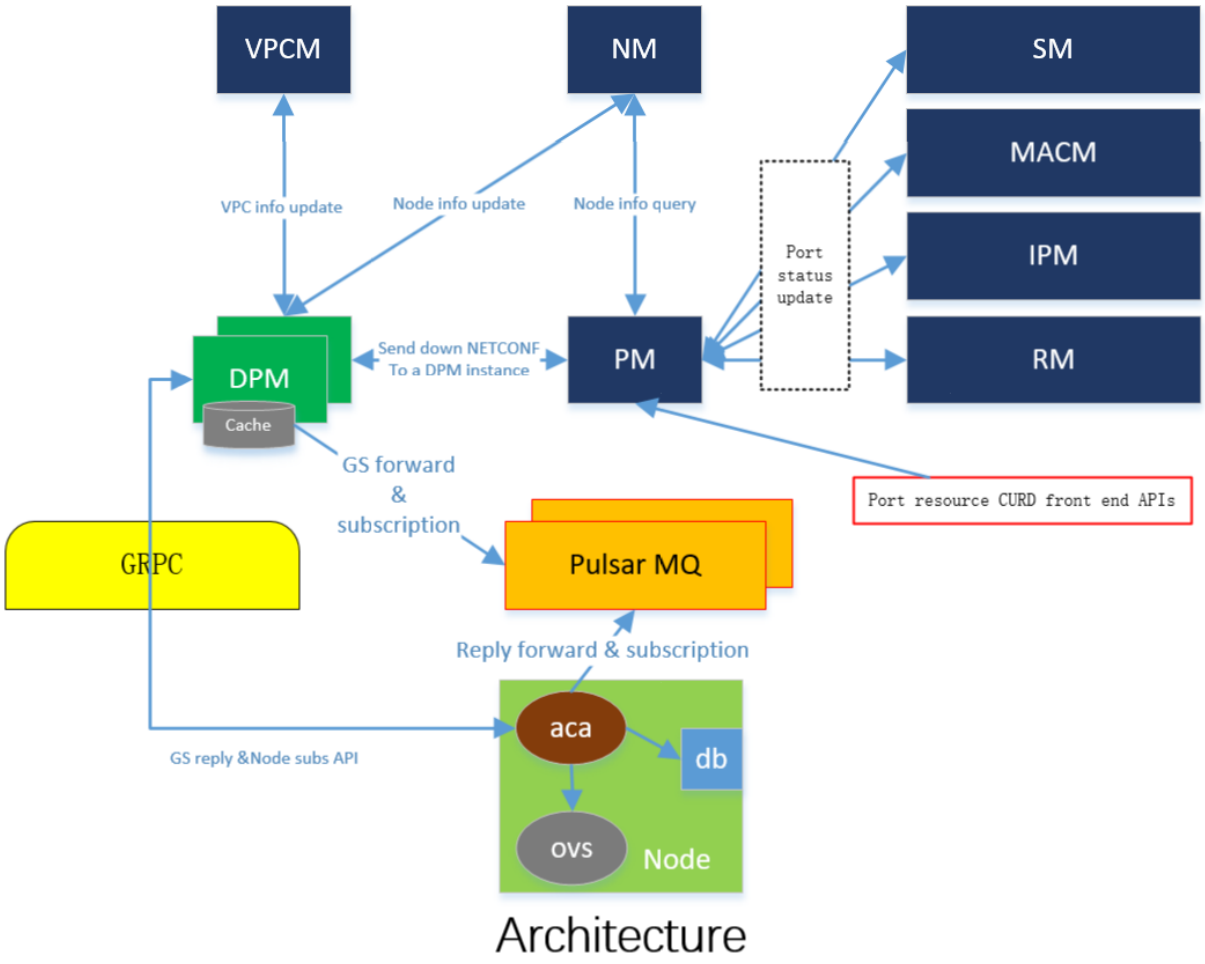
Alcor provides messaging services for controller and agent communication. Messaging services consists of two channels. GRPC and pulsar MQ.

# System Requirements

1. DPM can split the network configuration into multiple goal states. DPM can appropriately choose MQ or GRPC channel to send goal state to the corresponding ACA.
2. When ACA configures goal state successfully, it returns success reply. When DPM receives replies of all goal states for a network configuration, it returns successful configuration to the caller
3. Messaging services can support 1000,000 data compute nodes.
4. Working together with other services including Node, Port, VPC, Data Plane managers.
5. Fast, reliable and scalable

# Design

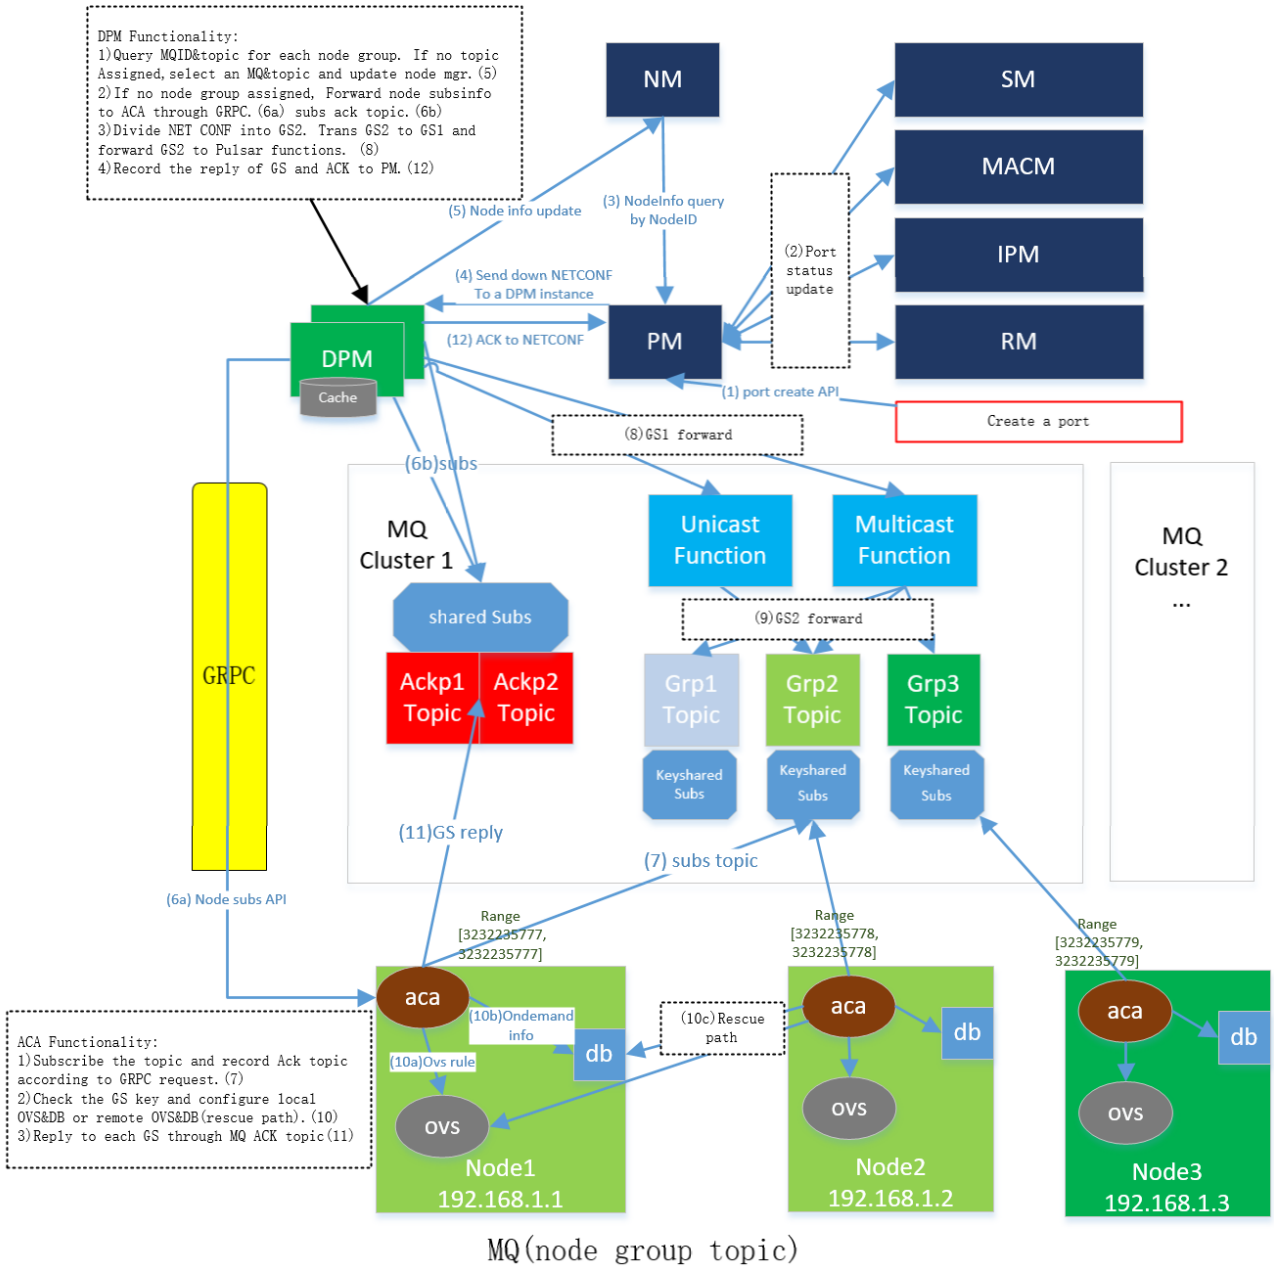
## Architecture



We have two architectural design options.

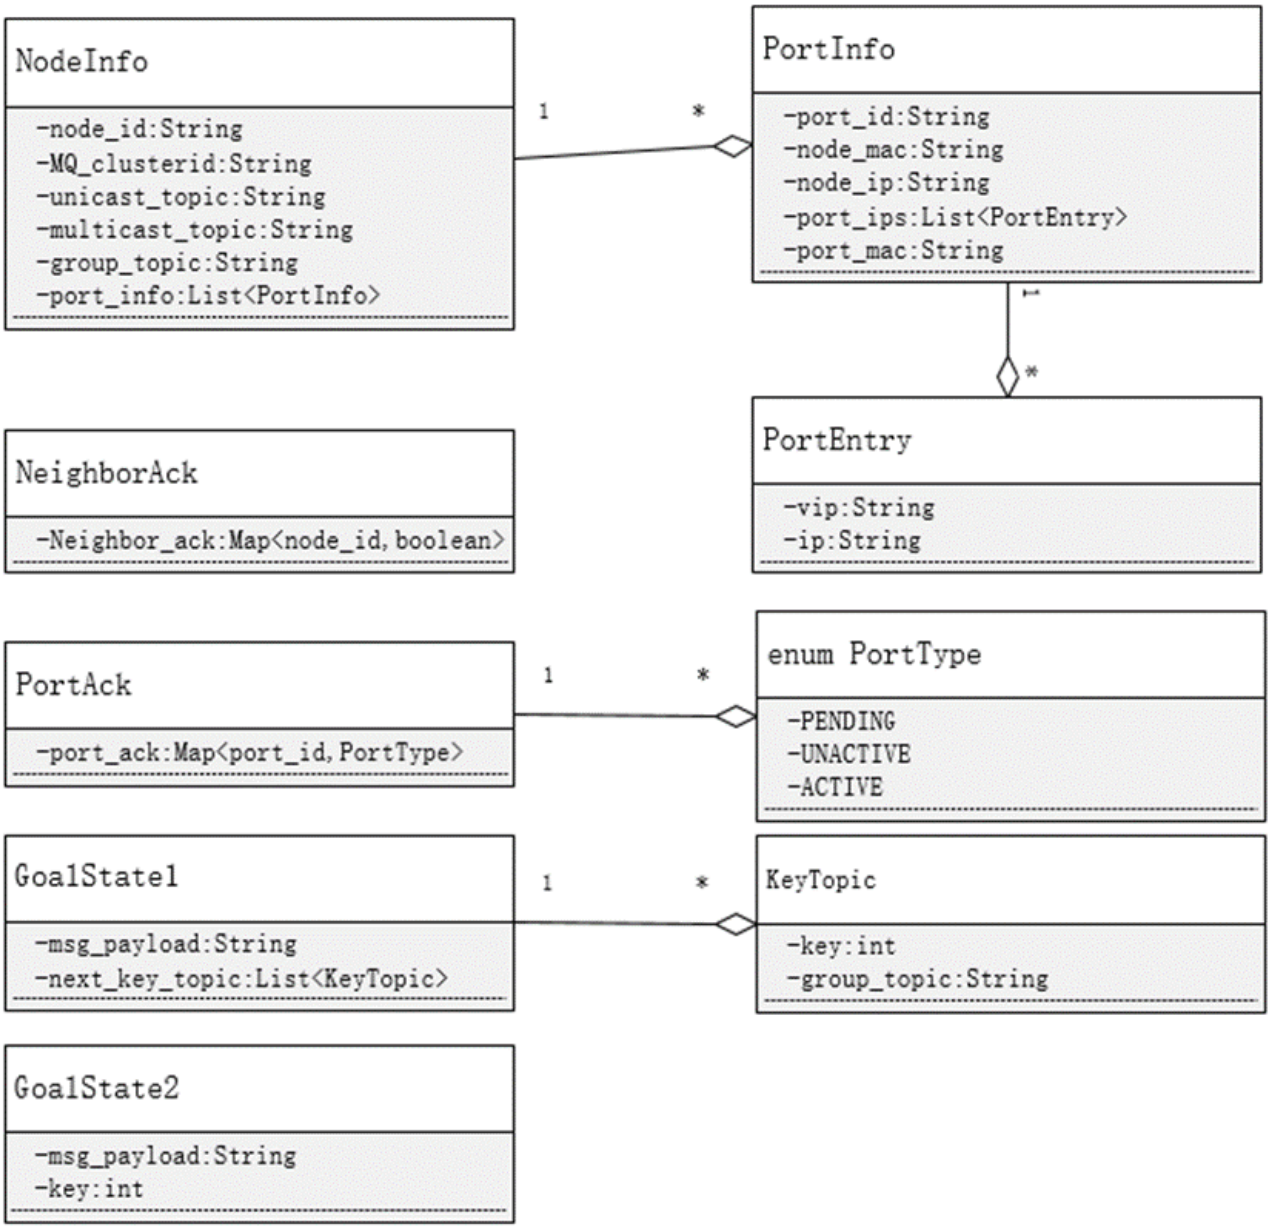
## Design Option: MQ (Node Group Topic)

### Workflow



MQ(node group topic)

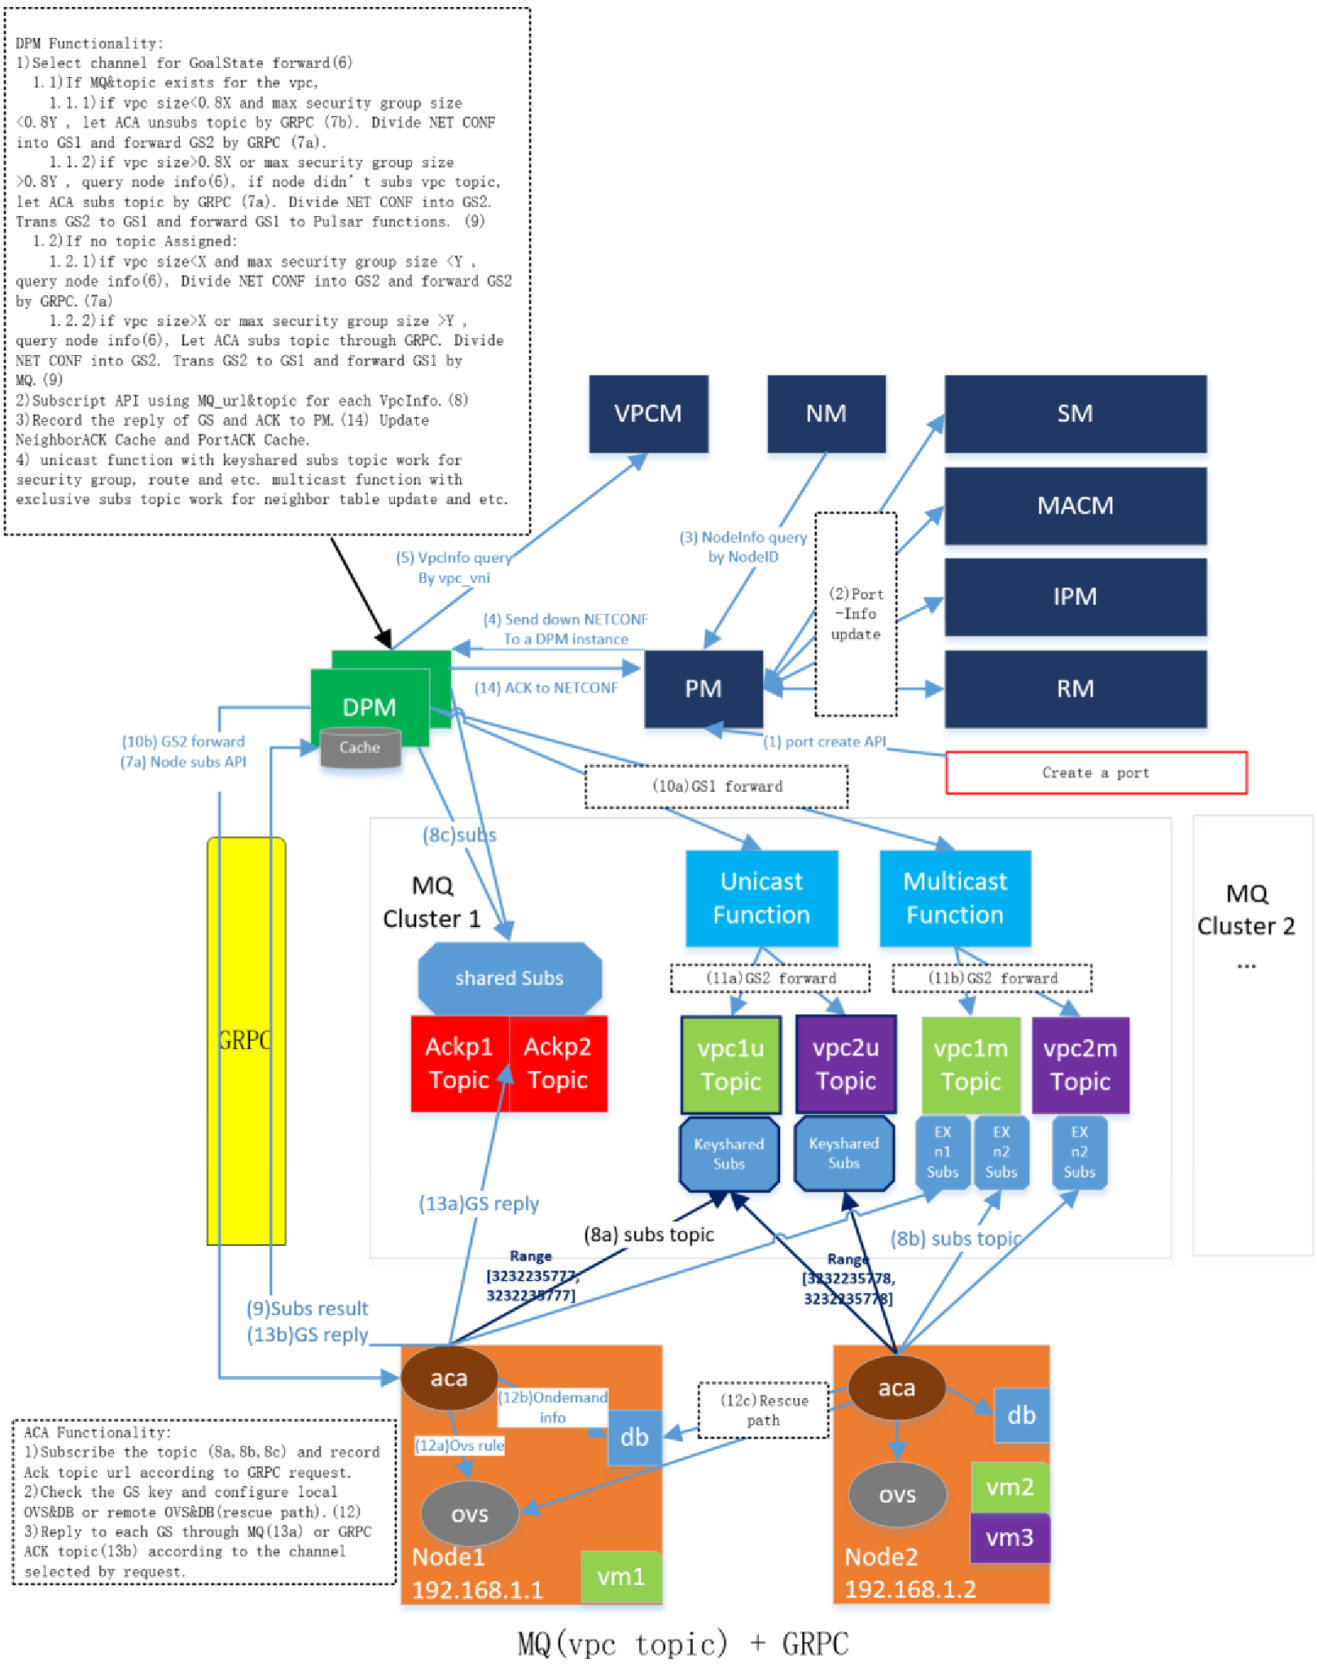
## Data Schema for Design Option: MQ (Node Group Topic)



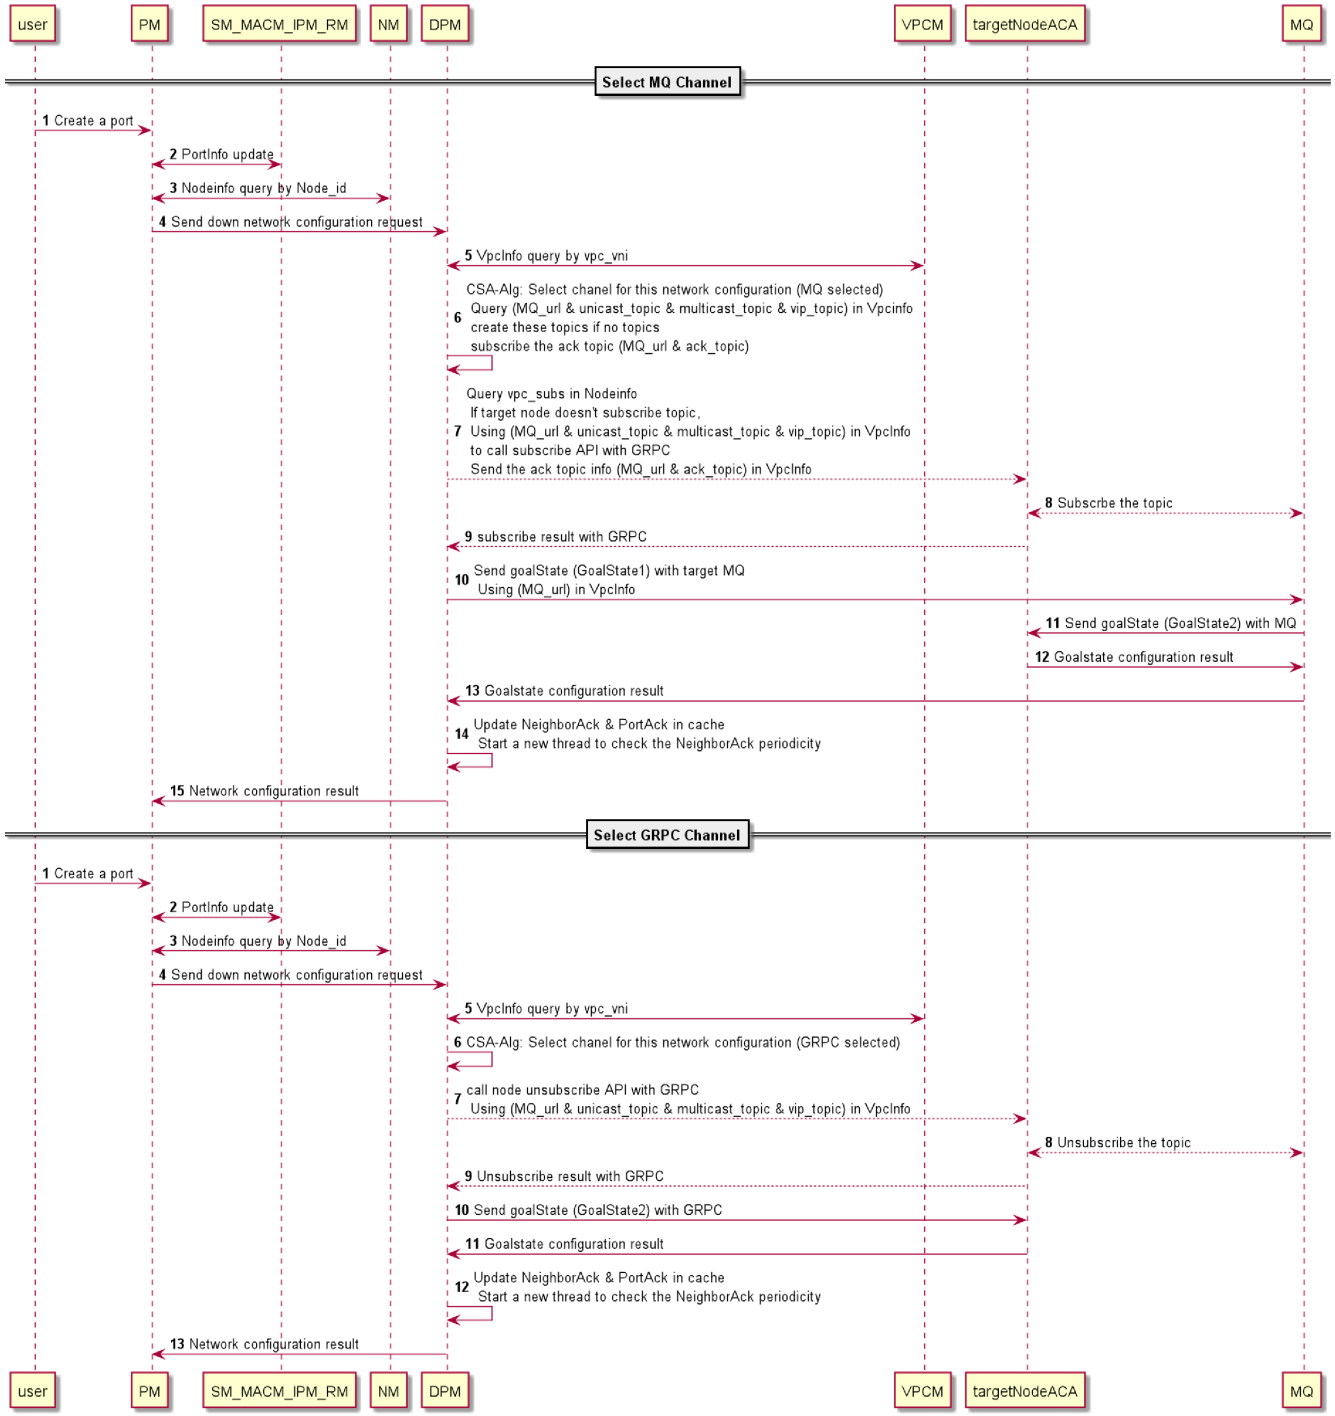
MQ(node group topic)

## Design Option: MQ (VPC Topic) + GRPC

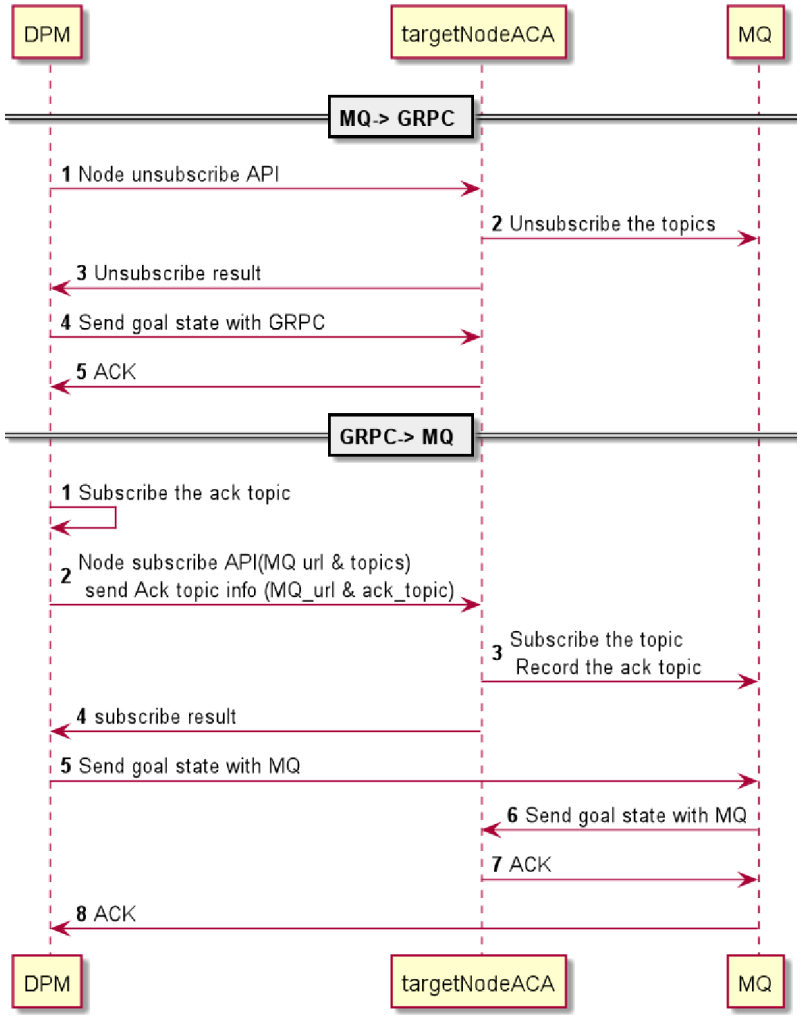
### Workflow



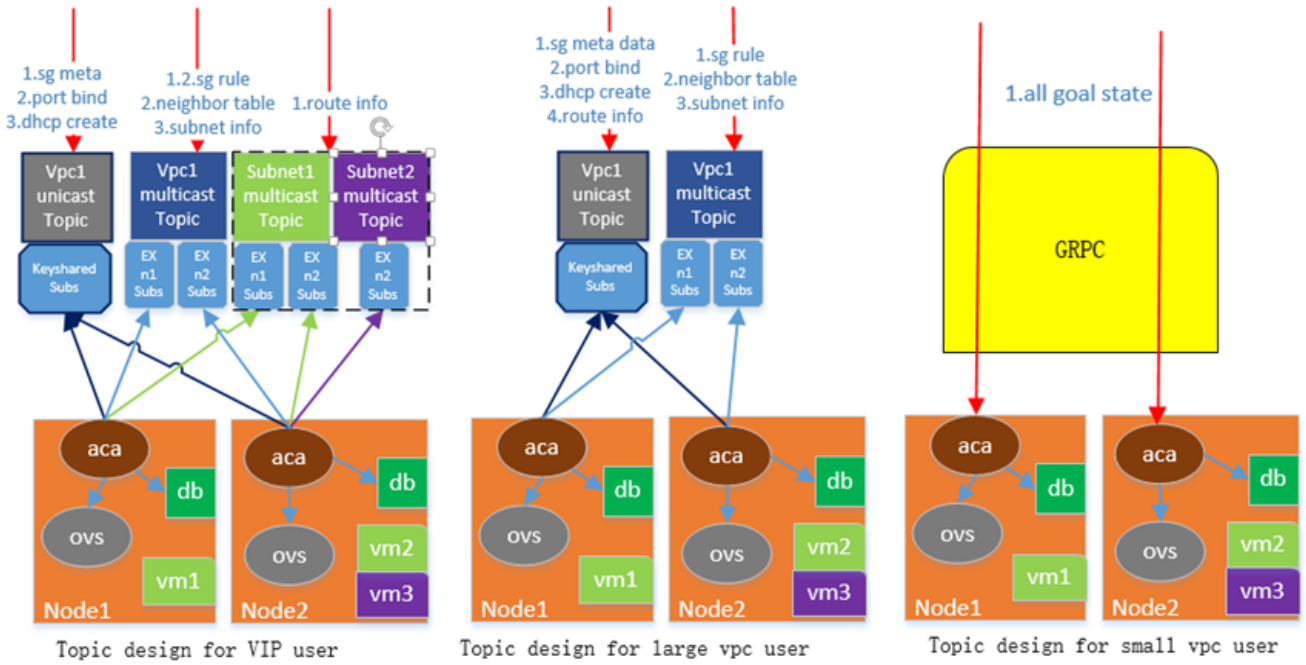
## Workflow UML



## MQ topic subscription or unsubscription



### Channel & MQ topic Selection for each goal state



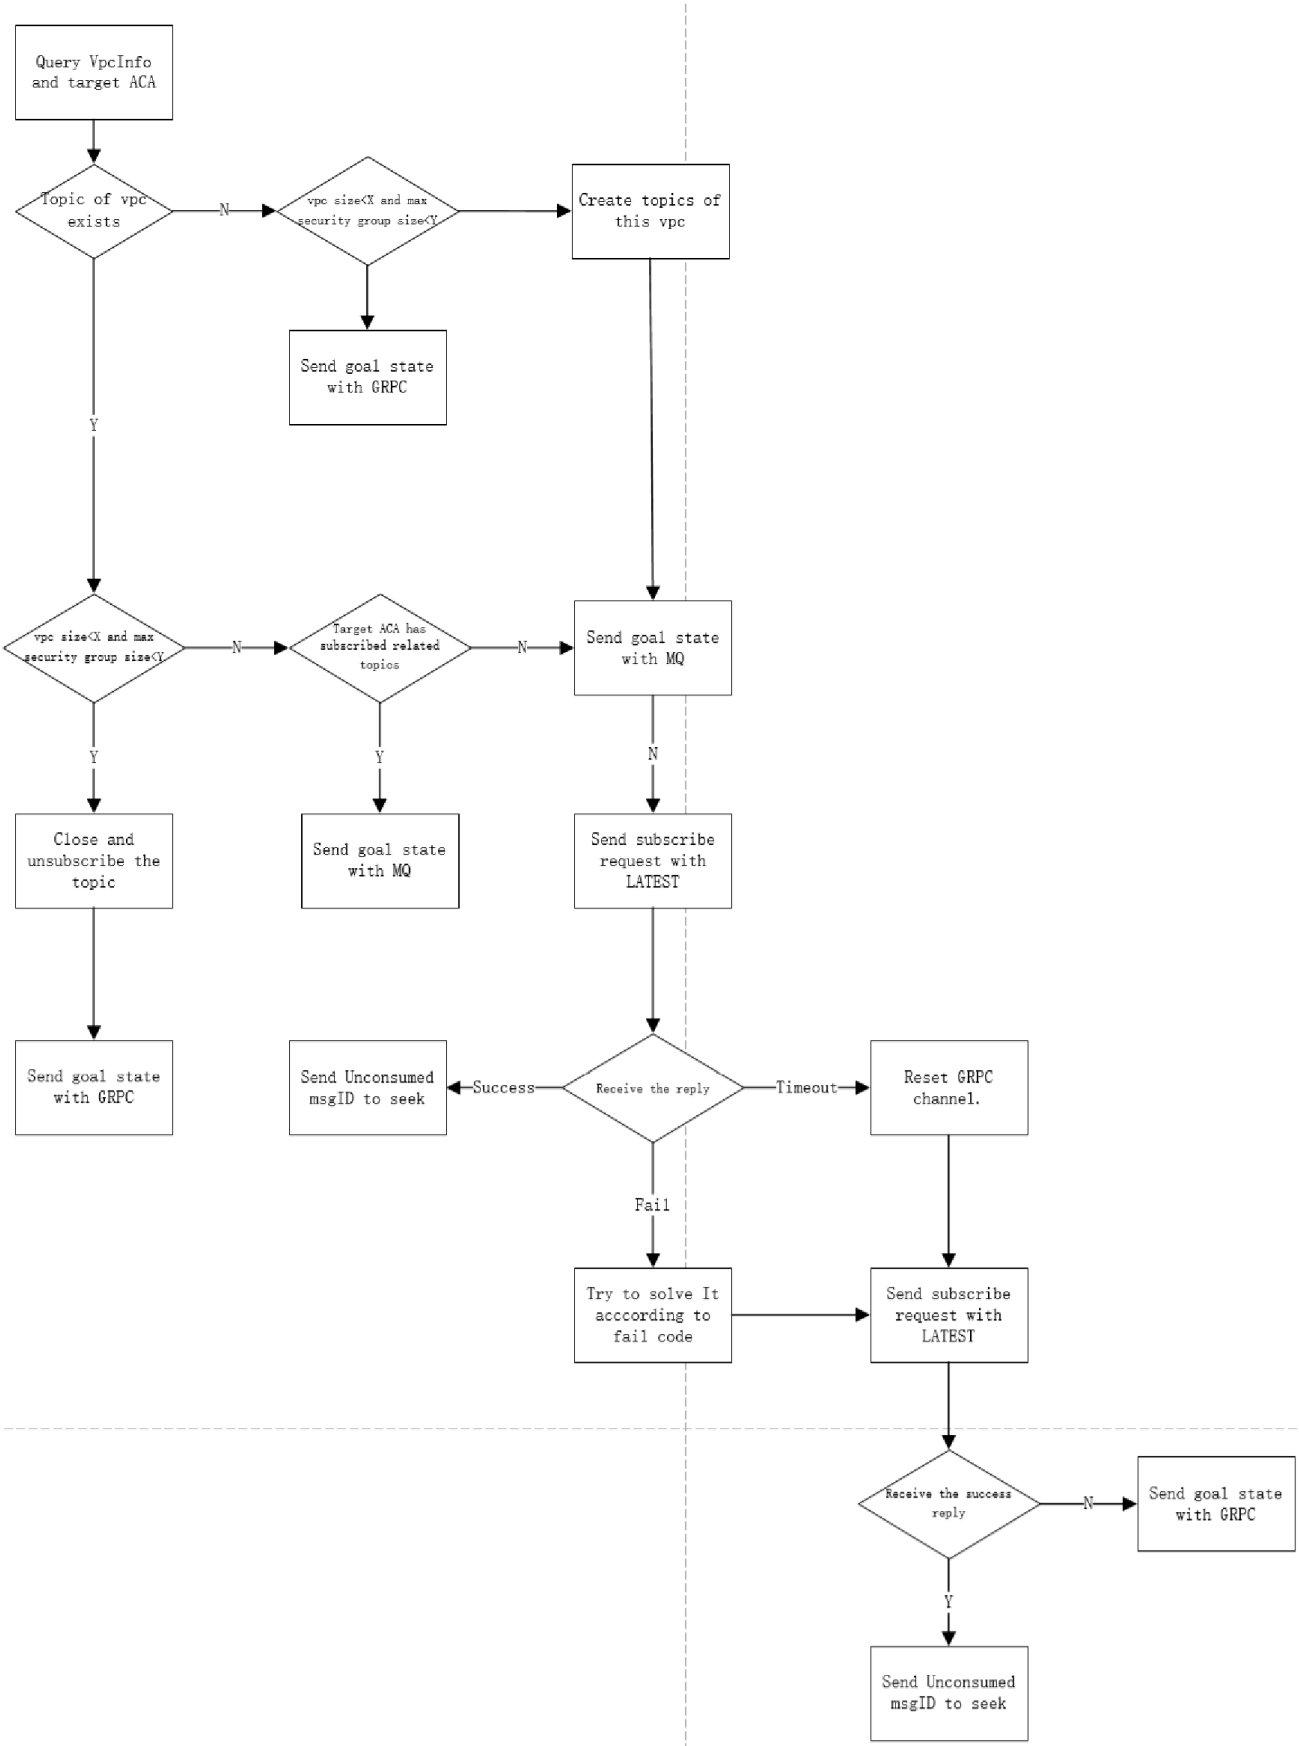
| Category | Topic | Examples |
| --- | --- | --- |
| Unicast goal state | unicast topic | port bind□dhcp create□route info |

| Category | Topic | Examples |
| --- | --- | --- |
| Multicast goal state | multicast topic | neighbor table |
| Group multicast goal state | unicast topic & multicast topic | security group metadata & rule |

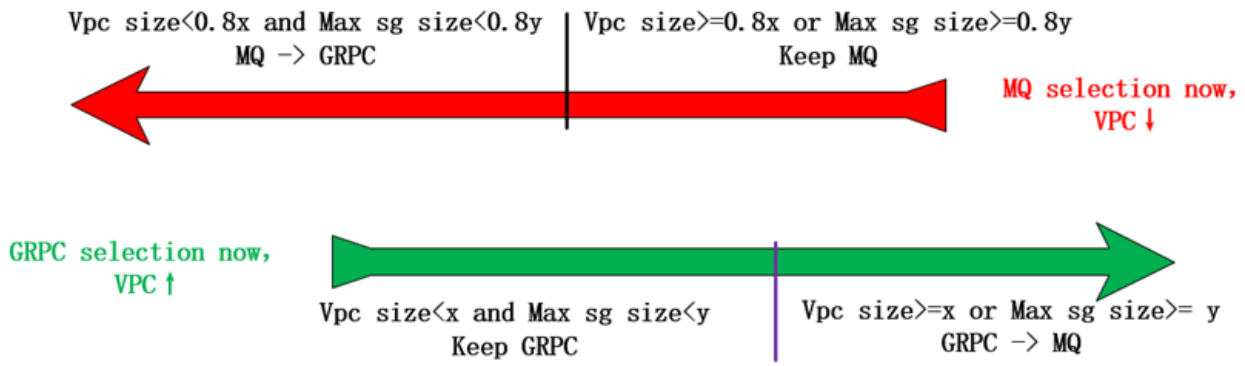
**Channel Selection Algorithm**

**Algorithm 1** CSA: Channel Selection Algorithm for Alcor

1: $X$ and $Y$ are two constants.
2: **if** The topic of vpc-1 already exists in MQ. **then**
3: **if** Size of vpc-1 is greater than $0.8X$ or a security group is mapped to more than $0.8Y$ ports **then**
4: **if** Target ACA does not subscribe topics of vpc-1 **then**
5: Target ACA subscribes both unicast&multicast topics of vpc-1 with SubscriptionInitialPosition.Earliest.
6: **if** Receive subscribe failed ACK **then**
7: Sending goal state of vpc-1 with MQ.
8: **if** Receive subscribe failed ACK **then**
9: Resubscribe the topic. Go to line 5.
10: **if** Subscribe timeout **then**
11: Reset GRPC channel. Resubscribe the topic. Go to line 5.
12: **if** Size of vpc-1 is smaller than $0.8X$ and no security group is mapped to more than $0.8Y$ ports **then**
13: Close the topic of vpc-1, let related ACA unsubscribe the topic when at the right time.
14: Send goal state of vpc-1 to the target ACA with GRPC.
15: **if** There is no topic of vpc-1 in MQ. **then**
16: **if** Size of vpc-1 is greater than $X$ or a security group is mapped to more than $Y$ ports **then**
17: Create topics of vpc-1
18: Target ACA subscribes unicast&multicast topics of vpc-1 with SubscriptionInitialPosition.Earliest.
19: **if** Receive subscribe failed ACK **then**
20: Seek the multicast topic by unconsumed msgID.
21: Send new unicast goal state to unicast topic.
22: Send all multicast goal states to multicast topic
23: **if** Receive subscribe failed ACK **then**
24: Sending goal state of vpc-1 with GRPC.
25: **if** Subscribe timeout **then**
26: Reset GRPC channel. Resubscribe the topic. Go to line 18.
27: **if** Size of vpc-1 is smaller than $X$ and no security group is mapped to more than $Y$ ports **then**
28: Sending goal state of vpc-1 with GRPC.

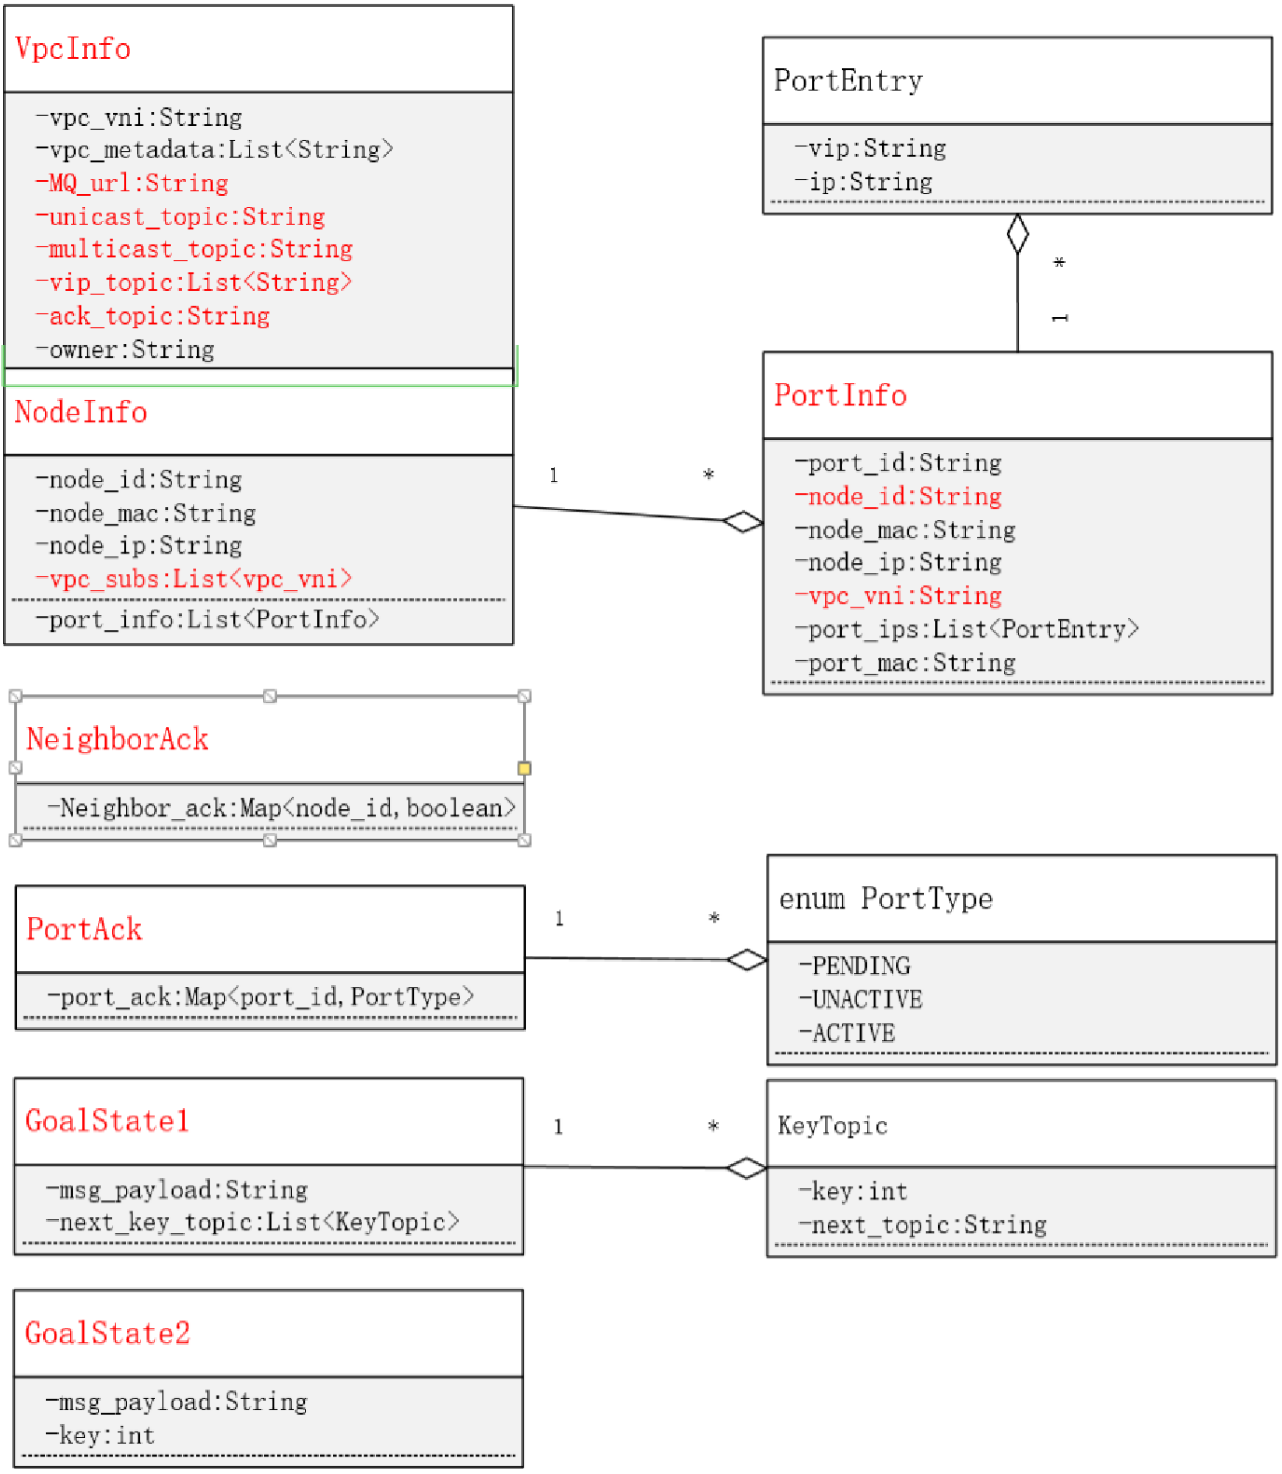


Send a goal state



Channel selection

**Data Schema for Design Option: MQ (VPC Topic) + GRPC**



MQ(vpc topic) + GRPC

# Task Allocation

| Name | Task |
| --- | --- |
| Min Chen | Interaction among managers (steps 1-5 in Workflow UML:select MQ Channel & select GRPC channel); Channel selection ALG (step 6 in Workflow UML:select MQ Channel & select GRPC channel) |
| Luyao Luo | ACA subscript/unsubscript (steps 8,9 in Workflow UML:select MQ Channel & select GRPC channel) |
| Jiawei Liu | subscript/unsubscript API (step 7 in Workflow UML:select MQ Channel & select GRPC channel); Goalstate send (steps 10,11 in Workflow UML:select MQ Channel; step 10 in Workflow UML:select GRPC channel) |
